

The new spa & wellness area received a new building separated from the hotel.

### Project Data

Area: 440 m<sup>2</sup>

Construction Year: 2009

Architect/Design:  
Carlos Subirà, Lloret de Mar

Contractor:  
Jardinatura S.L., Terrassa

Coordinates:  
41°41'19.96"N 2°49'16.02"E

### Conception

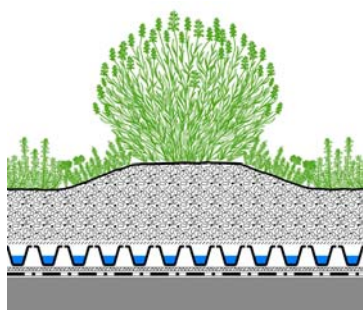

The new SPA-extension building of the hotel was carefully located at a very special and attractive location to provide the hotel guests besides many amenities a uniquely beautiful view of the Mediterranean Sea. The roof of the building got usable areas combined with a roof garden. So festivals, dinners and other

events can be performed in front of a delightful and natural scenery. The basis to this were the ZinCo system build-ups with Floradrain® FD 25-E below the hard landscapes and Floradrain® FD 40-E below the green areas. The planted beds received an additional drip irrigation.

As a fall protection a railing was attached with transparent infill.

### System Build-up

- Plant layer
- System Substrate
- Filter Sheet PV
- Floradrain® FD 40-E
- Protection Mat SSM 45
- Roof construction with root resistant waterproofing

The roof surface was divided into two areas. The left side received wooden decking and the right side was filled with ornamental gravel.

### Development

Floradrain® FD 40-E is used as permanent formwork for the separation between hard surface and garden.

During the assembly of the "IPE" - hardwood flooring, on which 'events', dinners and festivals are planned.

During application of the graveled area on top of the Filter Sheet PV.
